Appendices prepared by the ASBJ/EFRAG staff to accompany their quantitative study on goodwill and impairment

Appendix 1: Outline of the quantitative study

Appendix 2: Primary data set

APPENDIX 1

Outline of the Quantitative Study

Background

- 1. In response to the findings from the Post-implementation Review (PIR) of IFRS 3 *Business Combinations* and other feedback, the IASB is currently working on the following three topics in its research project on goodwill and impairment:
 - (a) identification and measurement of intangible assets acquired in a business combination;
 - (b) subsequent accounting for goodwill (including the relative merits of an impairment-only approach and an amortisation and impairment approach); and
 - (c) improving the impairment requirements for goodwill and other non-current, non-financial assets in IAS 36 *Impairment of Assets*.
- At its February 2016 Board meeting, some IASB Board members asked the IASB staff to provide quantitative information about the amounts of and trends in reported goodwill and intangibles and the related impairment losses in recent years.
- 3. European Financial Reporting Advisory Group (EFRAG) staff and Accounting Standards Board of Japan (ASBJ) staff, in collaboration with IASB staff, have conducted a quantitative study on goodwill and impairment. We believe the quantitative data we collected would facilitate the IASB's technical and conceptual discussions related to the accounting for goodwill.

Scope of companies analysed

- 4. We collected data of listed companies that constituted the following four stock indices in the U.S., Europe and Asia-Oceania¹:
 - (a) the S&P 500 index ('S&P') of the U.S.;
 - (b) the S&P Europe 350 index ('Europe') of Europe;
 - (c) the Nikkei 225 index ('Nikkei') of Japan; and

¹ The ASBJ staff also collected and analysed data for the Nasdaq 100 index of the U.S., the Hang Seng 50 index of Hong Kong and the KOSPI 100 index of Korea. We did not include the data from these indices in today's presentation because they provided similar results to one or more of the indices listed in paragraph 4.

- (d) the S&P ASX 200 index ('ASX') of Australia.
- 5. EFRAG secretariat collected and analysed data for the Europe index using the S&P Capital IQ database. ASBJ staff did the same for the S&P, Nikkei and ASX indices using the Bloomberg database.
- 6. For the Europe index, EFRAG secretariat started the analysis with the population of companies that constituted the index as of the starting date of the study (ie March 2016). The following companies were excluded from the population:
 - (a) companies which had no total assets in any of the years between 2007 and 2014; and
 - (b) companies which were repeated in the population (eg the parent and the group).
- 7. For the S&P, Nikkei and ASX indices, ASBJ staff started the analysis with the population of companies that constituted these indices as of the starting date of the study (ie March 2016). The following companies were excluded from the population:
 - (a) companies for which market capitalisation data were not available for any of the years between 2005 and 2014;
 - (b) for the Nikkei index, companies that applied accounting standards other than Japanese GAAP in 2014; and
 - (c) for the ASX index, companies that applied accounting standards other than IFRS in 2014.
- 8. With the adjustments mentioned in paragraphs 6 and 7, the numbers of companies analysed in our presentation were as follows:

Index	# of companies in index	# of companies analysed
S&P	504	443
Europe	351	328
Nikkei	225	164
ASX	200	134

9. This sample is not a *representative* sample and should not be used for *statistical inference*.

Years covered

- 10. We gathered data from 2007 to 2014.
- 11. Some companies had year-ends other than 31 December. For the S&P, Nikkei and ASX

indices, the financial data of those companies were classified in the year with the year-end closest to 31 December. For example, financial data of companies with the year-ends of 31 August 2014, 31 December 2014 and 31 March 2015 were all presented as data for 2014.

Data collected

- 12. We collected the following data:
 - (a) Goodwill;
 - (b) Intangible assets (other than goodwill);
 - (c) Goodwill impairment (and amortization, if applicable);
 - (d) Net assets (ie book value of total equity); and
 - (e) Market capitalization (ie market value of total equity).

Foreign currency translation

- 13. Financial data that were extracted for the Europe index were translated into Euros (EUR) using the historical exchange rate by the S&P Capital IQ database. Similarly, financial data that were extracted for the ASX index were translated into Australian dollars (AUD) using the historical exchange rate by the Bloomberg database. Financial data for the S&P index were all denominated in U.S. dollars (USD) and financial data for the Nikkei index were all denominated in Japanese yen (JPY).
- 14. In our presentation, all amounts were translated into U.S. dollars (USD) for the readers' convenience. A single exchange rate as of the end of 2014 was used for this translation, as shown in the following table:

1 EUR =	1.2098	USD
1 JPY =	0.0084	USD
1 AUD =	0.8172	USD

Data adjustments

- 15. For the Europe index, EFRAG secretariat found some negative impairment losses (ie negative expenses) in the data extracted from S&P Capital IQ database. In these cases, adjustments were made using the following methodology:
 - (a) for negative impairment losses greater than EUR 100 million, impairment figures were corrected by referring to the annual reports of these companies; and

- (b) for negative impairment losses less than EUR 100 million, the impairment figures were replaced with zero.
- 16. For the S&P, Nikkei and ASX indices, ASBJ staff made the following adjustments to the data extracted from the Bloomberg database:
 - (a) The Bloomberg database gathers standardised 'goodwill data' from primary financial statements and their accompanying notes. Bloomberg also gathers 'data disclosed by companies'. Comparing these two data sets, ASBJ staff referred to annual reports of the companies when necessary.
 - (b) The Bloomberg database defines 'intangibles' to include goodwill. Comparing the data for goodwill and that for intangibles, ASBJ staff referred to annual reports of the companies when necessary.

Industry classification

- 17. The industry classification used in our presentation is based on the Global Industry Classification Standard (GICS) developed by S&P and MSCI. This industry classification is applied consistently across all four indices that were analysed. The ten industries are as follows:
 - (a) Energy;
 - (b) Materials (eg chemicals, metals & mining);
 - (c) Industrials (eg aerospace & defence, construction & engineering, commercial services & supplies, transportation);
 - (d) Consumer Discretionary (eg automobiles, household durables, retail);
 - (e) Consumer Staples (eg food products, beverages, tobacco, household products);
 - (f) Health Care;
 - (g) Financials;
 - (h) Information Technology;
 - (i) Telecommunication Services; and
 - (j) Utilities.

Primary Data Set

Explanation of indices covered

Names (and abbreviations) of indices that represented the regions covered in the presentation are as follows:

- S&P 500 index ('S&P') of the U.S.
- · S&P Europe 350 index ('Europe') of Europe
- · Nikkei 225 index ('Nikkei') of Japan (Included only those companies that applied Japanese GAAP throughout 2005-2014)
- S&P ASX 200 index ('ASX') of Australia

Number of companies that recognised goodwill

	<u> </u>								
	Number of companies analysed	2007	2008	2009	2010	2011	2012	2013	2014
