Introduction

XBRL (eXtensible Business Reporting Language) is a standard that is used to communicate information between preparers and users of general purpose financial statements. The IFRS Foundation is responsible for developing the XBRL representation of the IFRS Sustainability Disclosure Standards – issued by the International Sustainability Standards Board, known as the IFRS Sustainability Disclosure Taxonomy.

The IFRS Sustainability Disclosure Taxonomy is composed of a set of electronic XBRL files which can be difficult to view and understand without the use of specialised software. Consequently, the IFRS Foundation has published this IFRS Taxonomy Illustrated document to facilitate understanding of the IFRS Sustainability Disclosure Taxonomy and its structure, and ultimately to assist with the tagging of disclosures prepared using IFRS Sustainability Disclosure Standards.

This IFRS Taxonomy Illustrated presents the structure of the IFRS Sustainability Disclosure Taxonomy in a simplified visual format, based on the ‘presentation view of the taxonomy’ provided within the taxonomy itself. This presentation view shows the taxonomy elements (line items, axes and members) in a hierarchical structure. The presentation view is intended to help users view and navigate the Taxonomy to find the correct element (or elements) for tagging. The presentation view does not dictate how preparers should organise their human-readable reports or dictate how data resulting from the tagging of those reports can be viewed or analysed by users of that data.

The IFRS Taxonomy Illustrated sets out:

- the hierarchy of the IFRS Sustainability Disclosure Taxonomy and the elements within it;
- the elements’ types, such as text, monetary values or dates; and
- references to the parts (sections, paragraphs, clauses etc.) of the IFRS Sustainability Disclosure Standards that define or require the disclosures these elements represent.

How to read the IFRS Taxonomy Illustrated

This section explains the format and content of the IFRS Sustainability Disclosure Taxonomy Illustrated. The explanations given here apply throughout the document.

First column—hierarchy

The first column of the document represents the hierarchy of the IFRS Sustainability Disclosure Standards:

- heading rows (with a red background) represent the name of a grouping of elements of the Taxonomy, such as an IFRS Sustainability Disclosure Standard (for example Climate-related disclosures), an aspect of core content (for example Risk management) or the list of default members for axes. Each heading row is preceded by a six-digit number in square brackets which has a value between [100000] and [999999]. These numbers are artificial and provide viewing and sorting functionality—they are not related to the IFRS Sustainability Disclosure Standards.
- rows below column headings represent the elements belonging to this grouping, including additional presentation elements that help navigate the Taxonomy and are not used for tagging:
 - headings for sub-groups of elements (Abstract elements); and
 - line items that denote the beginning of a series of disclosures for a table.

Second column—disclosure format

The second column of the document illustrates the possible formats that a given disclosure may take. These include:

- Text block—denotes that the disclosure format is a text block;
- Text—denotes that the disclosure format is text;
- Date—denotes that the disclosure format is a date;
- Monetary—denotes that the disclosure format is a monetary value;
- Decimal—denotes that the disclosure format is a decimal number;
- Percent—denotes that the disclosure format is as a percentage;
- Pure—denotes that the disclosure format is a (decimal) ratio where the units for the nominator and denominator are the same, or, where the element name or label clearly indicates the relevant unit of measure, simply a number;
- Duration—denotes that the disclosure format is a time interval;
- Area—denotes that the disclosure format is an area;
- Memory—denotes that the disclosure format is an amount of computer storage;
- Power—denotes that the disclosure format is an amount of power;
- Energy—denotes that the disclosure format is an amount of energy;
- Length—denotes that the disclosure format is a distance;
- Mass—denotes that the disclosure format is an amount of mass;

- Emissions—denotes that the disclosure format is expressed in terms of CO₂ equivalent;
- Flow—denotes that the disclosure format is an amount of something in a particular duration;
- Volume—denotes that the disclosure format is a volume;
- Count—denotes that the disclosure format is a non-negative integer number;
- True/false—denotes that the disclosure format is a logical ‘true’ or logical ‘false’ (Boolean);
- List—denotes that the disclosure format is an item from a list of specific possibilities (single value enumeration);
- Multiple Choice—denotes that the disclosure format is one or more items from a list of specific possibilities (set value enumeration);
- Table—denotes logical groupings of IFRS Sustainability Disclosure Taxonomy axes, members and line items;
- Axis—denotes information categories and components that concepts can be broken down into or reported by, for example, ‘Time horizon’;
- Domain – denotes the conceptual group of possible values for an axis, often used as the default value for an axis, expressing ‘all options’, ‘total’ and/or ‘not applicable’;
- Member—denotes a member (possible value) on an axis; and
- a blank column denotes that no disclosure is required.

Element properties:

- instant or duration—denotes that the disclosure represents a stock (if instant) or a flow (if duration). Note that elements are represented at the XBRL level by duration elements unless indicated as instant.

The IFRS Sustainability Disclosure Taxonomy uses the presentation linkbase to provide presentation views under which the line items, axes and members (or combinations of these as tables) have been grouped. The dimensional modelling of taxonomy elements within tables would not prescribe how the information should be disclosed in a general purpose financial report, which need not be tabular. The same tags could be used regardless of how the information is laid out in a report.

Third column—IFRS Sustainability Disclosure Standard reference

The third column indicates the corresponding paragraph or section in the IFRS Sustainability Disclosure Standard for a given disclosure, together with the nature of the reference:

- Reference—denotes a (non-specific) relation to text in IFRS Sustainability Disclosure Standard.
- Disclosure—denotes a disclosure requirement in IFRS Sustainability Disclosure Standard.
- Example—denotes an example in IFRS Sustainability Disclosure Standard.
- Common practice—denotes a common reporting practice for entities applying IFRS Sustainability Disclosure Standards. Common-practice elements are only developed once a requirement has been applied in practice.
- Metric Codes—indicate related metric codes used in other licensed ISSB materials.
